

### Abstract of the Disclosure

An air cleaner with aroma generation is disclosed. The air cleaner comprises a main body 10 formed with an outlet 11 for discharging the air filtered by the air filter; a fan installed inside of the main body 10 and forcing the filtered air to be discharged through the outlet 11; a receiving case 20 installed into the main body 10 and having first through-slits 21 formed on circumferential surface and hooking holes 22 in the shape of arc formed at an end thereof; a rotating case 30 for receiving an aroma pack, the rotating case being inserted into the receiving case 20 and having second through slits 31 corresponding to the first slits 21 formed along circumferential surface and hooks 32 formed at an end thereof for being hooked on the hooking holes 22, wherein the first through-slits 21 may or may not overlap with the second through-slit 31 depending on rotation angle of the rotating case 30 about an axis 33 while the hooks 32 are hooked on the hooking holes 22; and a lid 40 for opening and closing the rotating case 30.
